GitHub LinkedIn Website

Open to software architecture, senior engineering, and product-focused leadership opportunities.

About Me

Product-Oriented Software Architect

I specialize in building scalable, multi-tenant SaaS platforms that connect architecture decisions directly to product outcomes. My work spans backend architecture, cloud infrastructure, and technical delivery leadership across AWS and Azure environments.

I focus on reliability, cost and performance optimization, secure system design, and practical developer workflows. I enjoy turning complex product requirements into modular systems that are easy to evolve over time.

Work Experience

Fullstack Developer and Team Lead @ Neotech Solutions

2021-09 to 2022-08

Serbia - Full-time

Led delivery on a large-scale betting and casino platform.

Responsibilities

Led planning and code review across the team.
Delivered core betting modules and admin tooling.
Introduced Jenkins-based CI/CD pipelines.
Improved database performance and Redis cache usage.

Highlights

Increased delivery consistency through CI/CD adoption.
Helped stabilize high-traffic platform modules.

PHP 7.1 MySQL MongoDB Redis AngularJS Jenkins AWS Lambda API Gateway CloudFormation

Contractor @ MSInnovation

2022-03 to 2022-08

Remote - Contract

Worked on a multi-tenant SaaS platform for financial trading data with real-time dashboards and API integrations.

Responsibilities

Architected database-per-tenant multi-tenancy.
Built real-time feeds and dashboard workflows.
Implemented REST services and cloud integrations.
Enforced role-based security and CI/CD delivery.

Highlights

Helped shape a scalable architecture for tenant growth.
Connected backend services with responsive reporting dashboards.
Improved release consistency through deployment automation.

TODO: Confirm exact month for contract start date in this engagement.

C# | ASP.NET | Laravel | Vue.js | React | Node.js | AWS

Software Engineer (Contract) @ PZ Agency

2023-03 to 2023-09

Remote - Contract

Contributed to an affiliate marketing platform for e-gaming clients, focused on lead tracking, partner management, and analytics.

Responsibilities

Implemented lead attribution logic and partner CRM features.
Built analytics dashboards and reporting exports.
Optimized MySQL schema and caching strategies.
Integrated payment and reporting APIs.

Highlights

Improved attribution reliability for marketing data pipelines.
Delivered reporting capabilities used by business stakeholders.

TODO: Verify if this role overlapped with other concurrent contracts.

PHP | Kohana | JavaScript | MySQL

Software Engineer (Contract) @ FundPoint

2022-08 to Present

Remote - Contract

Worked on a large-scale data processing and reporting platform with custom workflows and hybrid SQL/NoSQL storage.

Responsibilities

Designed ETL and data pipeline workflows.
Built React dashboards and backend APIs.
Provisioned Azure resources and CI/CD pipelines.
Tuned query performance, indexing, and caching.

Highlights

Improved end-to-end data flow reliability for reporting workloads.
Supported platform scale with structured performance tuning.

C# | ASP.NET | React | Azure | PostgreSQL | MongoDB

Software Engineer @ ZUA Lilly Drogerie

2019-01 to 2020-03

Serbia - Full-time

Built and maintained backend services and integrations for business operations.

Responsibilities

Developed Laravel and PHP backend features.
Worked with MySQL and MSSQL data workflows.
Built and maintained jQuery-based interfaces.
Supported deployment and runtime operations on CentOS.

Highlights

Improved reliability of day-to-day operational tooling.

Laravel | PHP | MySQL | MSSQL | jQuery | CentOS

Core Skills

Languages and Frameworks

PHP (Laravel, Symfony, CodeIgniter, Kohana, Slim)

Databases

MySQL
Redis

Cloud, DevOps and Delivery

- AWS (EC2, S3, Lambda, API Gateway, CloudFormation, CloudWatch)
- Jenkins
- Git
- Nginx

Architecture and Systems

- Domain-driven and modular architecture
- Event-driven systems, queues and pub/sub
- Multi-tenancy (domain/subdomain routing, DB-per-tenant)
- API design (REST, GraphQL, gRPC)
- Caching and CDN strategy
- Observability (logging, metrics, tracing)
- Security practices (OWASP Top 10, secrets management)
- CI/CD release strategies (canary, blue-green, feature flags)

Product and Delivery

- Agile and Scrum workflows
- Ticketing systems
- Project planning and diagramming (draw.io, Azure Boards)
- Payments and billing integrations
- Notification systems (email, SMS, push)
- Webhooks and third-party integrations
- API documentation (OpenAPI/Swagger)

Open Source Ecosystem

Selected ecosystem-level work focused on reusable tooling, integrations, and community-facing engineering.

zpm-packages

reusable open-source packages - Active

Reusable package ecosystem for production-oriented components and integrations.

25+ packages

Explore

zpm-experiments

experimental projects and research - Active

Experimental repositories used for prototyping ideas, validating architecture patterns, and testing new tooling approaches.

10+ repos

Explore

community-sdks

multi-language SDK ecosystem - Active

SDK-oriented ecosystem that spans multiple languages for practical API integration use cases.

C, C#, C++, Go, Java, JS, PHP, Python, Rust, TS

Explore

i18n-audit

translation audit tools - Growing

Tooling ecosystem focused on translation coverage checks and localization quality workflows.

growing

Explore

Explore the broader ecosystem on GitHub.

Master of Science in Informatics

Institution: Singidunum University
Period: 2019-2021
Thesis: Data compression and encryption

Bachelor of Science in Information Technology

Institution: Singidunum University
Period: 2015-2019
Thesis: Security in Internet communication
